SUMMARY

Software Engineer with 3–4 years of experience in developing web applications using .NET and Angular. Currently pursuing a Master's in Artificial Intelligence in Germany, with a focus on applying AI in practical business scenarios. Experienced in modernizing legacy systems, building RESTful APIs, and working in Agile teams to deliver maintainable and efficient solutions.

WORK EXPERIENCE

Global ESoftSys, Mangaluru, India : Software Engineer

August 2023 – February 2026

- Migrated legacy VB applications to ASP.NET Core and Angular for projects including Booth Tracker Cloud (market space rental management), Mobil Rentals (Quick rental management - remote devices), and Antiquesoft (inventory/business management).
- Collaborated with system architects to design and develop applications from scratch, including building a functional prototype (PoC) to validate system architecture
- Contributed to 3 major enterprise projects, from initial development to successful production deployment
- Improved application performance by ~25% through optimized architecture and database handling
- Developed dynamic and responsive UI components using Angular (TypeScript) to enhance user experience
- Designed and integrated RESTful APIs using Entity Framework
- Supported onboarding of legacy clients by maintaining and enhancing migrated applications
- Worked in Agile (Scrum) teams, consistently contributing to high on-time delivery rates

Raasoft Infotech, Mangaluru, India : Software Engineer

February 2022 – July 2023

- Maintained and enhanced ERP system functionality for multiple clients, improving overall workflow efficiency
- Developed and deployed new features, patches, and bug fixes in existing production applications
- Built new client-specific applications based on a shared architecture, ensuring consistency and faster delivery
- Implemented scalable features using ASP.NET Core, AngularJS, and LINQ
- Conducted code reviews and applied best practices to improve code quality and maintainability

Siona Solutions, Mangaluru, India : Software Developer Intern

October 2021 – February 2022

- Developed a student portal system (St. Aloysius College – StudentConnect) using PHP and Laravel, including modules for user management and library operations
- Implemented backend functionalities and integrated database operations to support core system features
- Identified and resolved bugs, improving overall system stability and performance
- Enhanced application security by addressing vulnerabilities and applying best practices

EDUCATION

M.Sc. Artificial Intelligence (ongoing)

May 2026 – Present

Berlin School of Business and Innovation, Berlin, Germany

- Focus Area: Machine Learning, Natural Language Processing, Robotics, Automation, Computer Vision

Bachelor of Computer Applications (BCA)

2017 – 2020

St. Raymond's Degree College, India

- Focus Area: Software Development, Web Technologies, Database Systems

TECHNICAL SKILLS

Programming Languages : C#, JavaScript, TypeScript, Php, Python

Backend Development : ASP.NET Core, REST APIs, Entity Framework, LINQ, Laravel, Django, Flask

Frontend Development : Angular, AngularJS, HTML, CSS

Databases : SQL server

Cloud & DevOps : Microsoft Azure, Azure DevOps

Version Control & Collaboration : Git, Team Foundation Server (TFS)

Development Methodologies : Agile (Scrum)

MAJOR PROJECTS

Booth Tracker Cloud : Space rental and vendor management platform for flea markets, indoor markets, and swap meets.

- Migrated multiple legacy VB applications to ASP.NET Core and Angular, including Booth Tracker Cloud, Mobil Rentals (MR), and Shopper Admission
- Collaborated with system architects to design application architecture and validate technical solutions through proof-of-concept development
- Developed and maintained business-critical modules covering booth management, vendor management, rental processing, shopper admissions, user administration, billing, and reporting
- Implemented dynamic graphical layouts for real-time booth allocation and occupancy management
- Built RESTful APIs and integrated SQL Server databases using Entity Framework
- Supported production deployments, client onboarding, and ongoing maintenance for existing customers

Technologies : ASP.NET Core, Angular, TypeScript, SQL Server, Entity Framework, Azure DevOps, Syncfusion.

RaasERP

Enterprise Resource Planning (ERP) system designed to manage production operations, employee attendance, payroll, and business reporting.

- Developed and enhanced ERP functionalities supporting production management, workforce tracking, payroll processing, and operational reporting
- Implemented new features and client-specific enhancements using ASP.NET Core, AngularJS, and SQL Server
- Maintained and optimized existing modules, improving system reliability and usability
- Developed backend logic and database integrations to support business-critical workflows
- Delivered bug fixes, patches, and production releases across multiple client deployments

Technologies : ASP.NET Core, AngularJS, SQL Server, LINQ

StudentConnect

Student portal system developed for St. Aloysius College mangalore, to support student services, academic information, and digital library operations.

- Developed and enhanced the Library Module, enabling students to browse and access an interactive catalog of digital resources
- Implemented features allowing users to create annotations and interact with library content for a more engaging learning experience
- Developed import and export functionalities for managing student data efficiently
- Enhanced student dashboard features and profile management functionalities to improve usability and accessibility
- Participated in bug fixing, testing, and maintenance activities to ensure system reliability and performance

Technologies: PHP, Laravel, MySQL

CERTIFICATIONS & TRAINING

Python Workshop – (Codelab Systems / Cognitive Solutions)

October 2020 - March 2021

Python Development Training / Workshop – Codelab Systems

Key Learning Projects:

- Healthcare Appointment System – Python-based appointment booking and communication platform
- Cancer Prediction Application – Integrated a pre-trained machine learning model to understand prediction workflows
- Face Detection System – Implemented face detection using OpenCV and pre-trained computer vision models
- Instagram Clone – Developed a social media prototype to learn application architecture and user management concepts
